

Proven • Non-Invasive • Drug-Free • Petcare Solutions

Take away their pain, without harmful side effects.

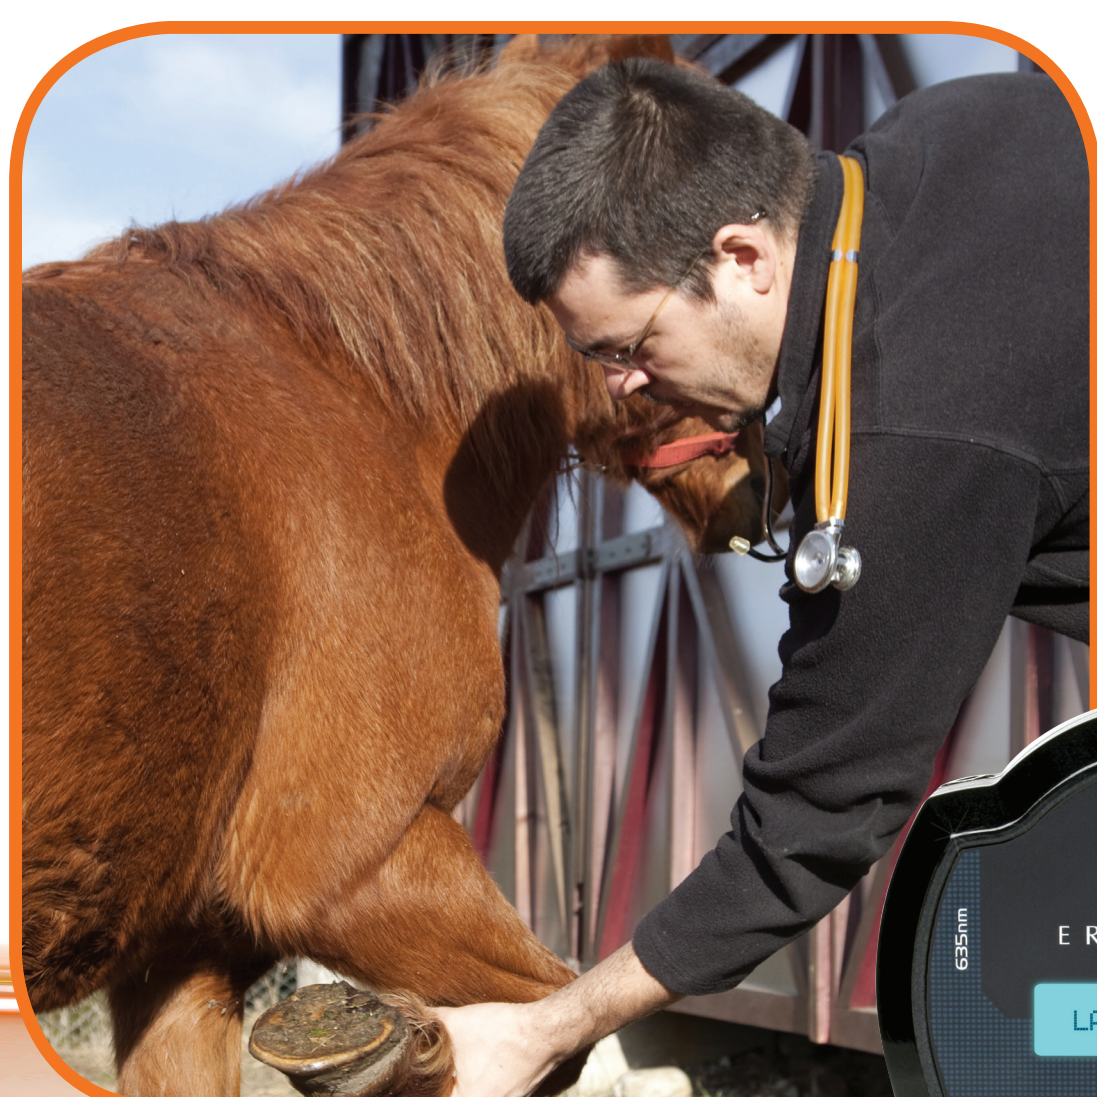

World's Most Trusted & Researched Therapeutic Lasers!

- ▶ **Five 510(k) FDA Market Clearances Proven Through More Level (1) Clinical Trials than All Other Lasers Combined**
- ▶ Tendon and Ligament Injuries
- ▶ Chronic Non-Healing Wounds
- ▶ Chronic Joint Pain
- ▶ Post Surgical Pain
- ▶ Bone Fractures
- ▶ Muscle Strains and Tears
- ▶ Degenerative Conditions such as... Navicular Syndrome
- ▶ For more Information on Low Level Laser Therapy, please visit www.erchonia.com

How Does Low Level Laser Therapy (3LT®) Work?

The effects of Low Level Laser Therapy (3LT®) are photochemical (cold), not thermal. Hot lasers in the medical world are used for surgical precision while cold lasers are used for healing precision. During treatment of the tissue with the 635nm low level laser, an interaction between cells and photons takes place—a photochemical reaction. Photons from the laser affect the tissue at the cellular level. The cold laser enters the tissue, alters cell membrane permeability, and at the cellular level is absorbed in the mitochondria. The mitochondria are the "Powerhouse" of the cells and make ATP which is needed for the life enhancement process of every cell.
